

Overview

Launch boxes are typically used with Optical Time Domain Reflectometers (OTDR). The boxes suppress the initial pulse when light leaves the transmitter of the OTDR enabling the OTDR to make measurements along the entire length of the fiber.

a range of pulse suppression boxes with fiber lengths up to 40 km. Singlemode and multimode fiber assemblies are available with FC/SC/ST and LC connectors, also including APC versions where applicable.

Customized boxes are available for any need.

Pelican Hardened Case Launch Boxes
